Technology

## Feeling the Chill..?

### Think about WARMOS™

Warmos™ is a wool like conjugate fibre, having a bilateral, bi-component coiled-crimped structure that provides excellent bulk and warmth.

Acrylic is mostly used in knitted garments for winter-wears. The prime requirement for this is that the garment should be bulkier which can provide superior thermal insulation. Warmos™ fibre in blend with regular acrylic fibre give bulkier yarn due to its spiral crimp. The spiral crimp gives the yarn spongy and elastic effect resulting into garment with woolly and warm feel.
