

Anti pilling

Fresh & New Look

Super-Soft

Pilbloc™
by Birlacril

*Have you ever faced
problem on pilling?*

Let's us share of what we are experienced, pilling is a fabric surface fault in which "Pill" of entangled fiber cling to cloth surface, giving a bad appearance to the garment. The importance of anti-pilling can be correlated to the durability and appearance of the fabric after few uses. Due to pilling the fabric loses its new look and people eventually discard the cloth.

Pilling is not so evident on the fabric made from natural fiber but it has been known to be quite common in case of synthetic fiber due its more tensile strength and flex life which prevents pills to fall easily.

Solution and experience through Pilbloc™

We have a range of Antipill fiber / Tow which resists the pilling over repeated use and washing. Knitwear and other apparel made out of Pilbloc™ look as good as new after repeated wash. Pilbloc™ fiber can be blended with any natural & synthetic fiber to enhances the pilling performance of garment.

USP of Product

- High Pilling grade of 4
- Soft touch & excellent wearer comfort
- New look even after prolonged use/ washing
- The ultimate solution for very soft ANTIPIIL CASHMERE LIKE garments even in yarn dyed varieties
- Used by International Brands
